

Agents for Humans Hackathon

Build an AI agent with Strands Agents SDK that handles repetitive tasks

Who can participate

- Above legal age of majority in of residence country

Deadline :

Sep 15, 2026 @ 5:30am [GMT+5:30](#)

(Online Mode)

Why Join?

- 🏆 Compete for \$40,000 in cash prizes across three tracks
- 🌐 Build with Strands Agents SDK, open source, production ready, built and trusted by teams at AWS
- 🛠️ Solve real problems people actually deal with, from daily chores to professional workloads to community logistics
- 💵 Get \$50 in AWS credits to cover your build costs (go to the [Resources tab](#) for request form)
- 🌍 Open to developers worldwide, solo or team, new or seasoned
- 📝 Earn bonus points by publishing your build story on builder.aws.com (see [rules](#) for details)

Requirements

What to Build

Build a new AI agent with Strands Agents SDK that does real work for people. Your agent should take on something people actually deal with and handle it end to end. Enter it in one of the three tracks below.

1. Everyday Agents - an agent that takes the busywork out of daily life, home, money, health, errands, family. The best ones run quietly in the background and only ping you when there's a real decision to make.
2. Professional Agents - an agent that makes someone dramatically better at the work they already do, professionals, makers, creators, small-business owners. Target the repetitive, judgment-heavy tasks that eat their day.

3. Good Neighbor Agents - an agent that helps groups of people, not just one, neighborhoods, nonprofits, food banks, schools, libraries, small local orgs.

Deploying with AgentCore is a smart architectural choice and will strengthen your Technical Implementation score, but it's not required.

What to Submit

- Text description - explain what your project does, who it's for, and how it works
- PUBLIC URL to your code repo
 - All source code, assets, and setup instructions needed to run the project
 - MIT or Apache open source license, visible in the About section of your repo
 - README
- Architecture Diagram
- Demo video (maximum 5 minutes) that includes
 - Demonstrates of your working project
 - Pitch must cover:
 - (1) the problem you're solving
 - (2) who it's for
 - (3) why it matters
 - Slides, screen recordings, and voiceover are all fine. No need to appear on camera
- AWS Builder ID
- (Optional) Live demo link (projects with a live demo score higher on Technical Implementation)

★ Bonus Points Publish a post on builder.aws.com covering your build journey and use of AWS for this hackathon. Use Agents for Humans in your title. You can submit more than one post. Posts must be publicly published before the submission deadline. See [Full Rules](#) for details.

Prizes

\$40,000 ~ ₹ 37,78,800 in prizes

➤ **Grand Prize**

\$10,000 ~ ₹ 9.45lakh in cash

1 winner

\$10,000 USD in cash

Featured in AWS Social Post

Meeting with AWS Technical Experts

➤ **Everyday Agents | Silver Agent**

\$3,000 in cash

1 winner

\$3,000 USD in cash

Featured in AWS Social Post

➤ **Professional Agents | Golden Agent**

\$5,000 in cash

1 winner

\$5,000 USD in cash

Featured in AWS Social Post

➤ **Professional Agents | Bronze Agent**

\$2,000 in cash

1 winner

\$2,000 USD in cash

Featured in AWS Social Post

➤ **Good Neighbor Agents | Silver Agent**

\$3,000 in cash

1 winner

\$3,000 USD in cash

Featured in AWS Social Post

➤ **Everyday Agents | Golden Agent**

\$5,000 in cash

1 winner

\$5,000 USD in cash

Featured in AWS Social Post

➤ **Everyday Agents | Bronze Agent**

\$2,000 in cash

1 winner

\$2,000 USD in cash

Featured in AWS Social Post

➤ **Professional Agents | Silver Agent**

\$3,000 in cash

1 winner

\$3,000 USD in cash

Featured in AWS Social Post

➤ **Good Neighbor Agents | Golden Agent**

\$5,000 in cash

1 winner

\$5,000 USD in cash

Featured in AWS Social Post

➤ **Good Neighbor Agents | Bronze Agent**

\$2,000 in cash

1 winner

\$2,000 USD in cash

Featured in AWS Social Post

Sunil Divvela
*Sr. WW Spec
Solution Architect,
Mainframe at AWS*

Judging Criteria

- **Technological Implementation**
How thoroughly and skillfully does the project use Strands Agents? Does the code reflect genuine effort and a working, non-trivial implementation? A live demo and/or Amazon Bedrock AgentCore deployment will strengthen this score.
- **Design**
Does the project deliver a complete, coherent product experience and not just a technical proof of concept?
- **Potential Impact**
Does the project make a credible, specific case for solving a real problem for a real audience, and does the solution actually address that problem based on what's demonstrated?
- **Creativity & Originality**
Is this a creative, non-obvious use of Strands Agents and does the team demonstrate genuine understanding of the problem space they're working in?
- **Presentation**
Does the video clearly demonstrate the project working end-to-end? Does the pitch communicate what problem is solved, who it's for, and why it matters? Is the overall presentation easy to follow?
